

At the heart of e-government

In 2007 Slovenia became no.2 in Europe regarding the development of e-government services. We are even more proud of this achievement, as we have contributed essential elements to this success.

Registries

By producing complete technology and process solutions for base registries we provide the Slovenian government with leverage for a successful transition from register orientation to register organization. Modern registers such as the Central Population Register, Register of Civil Status, Register of Permanent Population together with Register of Citizenship, Register of Foreigners, Register of Territorial Units and the Business Register enable government departments and agencies to establish powerful internet services for e-government front office for G2C and G2B, as well as infrastructure and services for back office e-government for G2G.

Elections

Genis is providing the Slovenian authorities with powerful web-based solutions for elections. The Genis solution ensures a complete portal working environment for integrated and controlled preparation of elections, execution of elections and reports on election results.

Biometric Passports

By introducing biometric passports last year, Slovenia became one of the first EU countries to fulfil the requirements of European Union regulations on standards for security features and biometrics in passports and travel documents. Genis has developed and produced a comprehensive information solution for issuing biometric passports and has also started modernising Slovenian records for identification and travel documents.

Genis provides solutions for successfully implementing the vision of e-administration: providing citizens and enterprises with immediate web-based access to straightforward, user-friendly, safe and accessible administrative services, and e-democracy applications.

Genis e-Government solutions enable the quick adoption of priorities such as user satisfaction, streamlining public administration, and introducing modern e-services, which simplify communication with public administration bodies. We provides public administrations with leverage to eliminate administrative burdens, develop of the innovative solutions, establish new models of operation, and collaborate with various government and civil organisations, individuals and other countries.

The latest technologies, extensive knowledge and experience, gained from partnerships with strongly regulated government organizations, allow Genis to minimize risks on e-government projects and go beyond providing solutions – becoming a partner for the success.

Results driven e-government projects

Genis governs the complete lifecycle of high-end government e-business solutions. Our proven methodology and methods ensure short development cycles and enable us to realize projects in determined time frames and financial resources. Genis' advanced methodology comprises modern approaches to project management, James Martin's Information Engineering Methodology, Oracle's Custom Development Method and IBM Websphere application development concepts.

Making the most of your investment

Our main strategic commitment is to provide environmentally friendly information solutions. Genis combines the best practices and the most sophisticated technologies with existing legislation framework to provide best of breed solutions. We ensure government departments and institutions with the highest level of security and value for their investments. Our solutions empower users with features and performance for superior productivity, paperless work, high scalability, easy deployment of new advanced services, growing data and processing power demands, integrating and building new applications or functionalities and compliance with future legislation. By implementing the best practices and building a common knowledge data base, Genis e-Government solutions improve the capabilities of all e-government administrators, and contribute to uniform and streamlined internal operations.

Technologies

Our government e-business solutions comprise world best and proven technologies from leading manufacturers such as IBM and Oracle. As they have been built on open standards, Genis e-Government solutions are platform independent, ensure long term support and strong further development. Using the approaches and technologies of Service Oriented Architecture, we guarantee additional value of investment with reusable functionalities and information resources, seamless integration between different databases and applications, and automation of working processes. Service oriented web solutions enable central administration of e-government in tune with the best application interoperability.
